

From Regulatory Burden to Strategic Advantage

THE PROBLEM

Regulatory complexity now limits growth and innovation

Ag-input companies operate in an environment where regulatory demands increase every year — across geographies, products, formulations, labels, and claims. What was once a back-office function has become a strategic constraint.

The impact is measurable:

- Product registrations in major markets routinely take 18–36 months
- A significant share of new product concepts are delayed or dropped due to regulatory uncertainty
- Regulatory teams spend the majority of their time managing status, documents, and exceptions — not enabling innovation

The consequences go beyond compliance burden:

- Slower product innovation
- Delayed entry into new markets
- Conservative formulation and claim strategies
- Growth decisions driven by uncertainty, not opportunity

Most teams still rely on fragmented tools:

- Spreadsheets for registrations and renewals
- Email threads for regulatory decisions
- Shared folders for dossiers and labels
- Critical knowledge locked in people's heads

This limits innovation and growth.

THE AGRILEX PLATFORM

One secure platform for regulatory execution and growth decisions

AgriLex is a purpose-built platform for ag-input companies that brings regulatory operations and growth intelligence into a single, secure workspace.

It is designed to help teams move from reactive compliance to confident, forward-looking decision-making.

RegOps™ — Regulatory Operations

- Registration and renewal tracking across countries
- Dossiers, labels, and documentation management
- Regulatory calendars, obligations, and alerts
- Full traceability and audit readiness

AgGrow™ — Growth & Expansion Intelligence

- Regulatory pathways for new products and formulations
- Market and country expansion feasibility
- Dependency and constraint visibility before investment
- Portfolio and pipeline decision support

WHO WE ARE

Built by people who understand regulated agriculture

AgriLex was created by practitioners with deep experience across:

- Agricultural inputs and life sciences
- Regulatory science and operations
- Strategy, product, and market expansion

We have worked inside ag-input companies and alongside regulatory teams. We understand the realities, trade-offs, and pressures of operating in regulated markets.

Designed in Europe, for European ag-input companies — with a global outlook.

AgriLex is built to be practical, credible, and trusted — not theoretical.

WHY AGRILEX

Designed for trust, speed, and real-world use

Built on trust and security

- All customer data is encrypted
- Customers retain full ownership of their information
- Access limited to authorized users only
- Customer data is never used by AgriLex for any other purpose

Fast, practical onboarding

- Structured onboarding approach
- Clear data migration
- Platform usable within one week

A different outcome

Compliance stops being a bottleneck — and becomes a competitive advantage.

AgriLex

Clarity for today. Optionality for tomorrow.
